

Anacondas available from

MSC

DF410 out on hire,
screening Road Millings

Mobile Screening and Crushing New Zealand (MSC) has been busy over the summer period with a range of Anaconda mobile screens it has available for dry hire. Its hire clients range from small companies with short-term requirements through to larger companies with secured seasonal contracts or projects requiring longer hire terms.

For almost twenty years MSC has provided equipment nationwide to process a large variety of product, including soil, compost, woodchip, palm kernel, road milling, aggregates, peat, etc. The two Anaconda models currently available for hire are the DF410 scalping screen and the TD516 trommel. Both models are track mounted and, with MSC's well-designed staff induction process, are easy to operate.

DF410: A versatile track-mounted scalping screen with a 10ft x 4ft two-deck screenbox. The DF410 is MSC's most sought after screen for both sales and hire due to its compact size and impressive performance.

TD516: A track-mounted trommel with a 5ft x 16ft drum. The drum angle is adjustable through four degrees and the drum speed variable — adjustable to suit the product being processed. The drum brushes ensure the mesh sections are consistently clean. Applications include compost, woodchip, soils, palm kernel, bark etc.

MSC has placed hire machines onto sites North Island-wide. It always takes the time to

Director Andy Meikle checking
in on a client's site

ensure the client is satisfied with the way the equipment is working with their product and that site staff are properly trained and inducted. The MSC hire machines are well maintained and their staff are very prompt to address any issues arising during the course of a hire contract.

Because of its industry experience, MSC can be trusted to troubleshoot and make the best recommendations for each client's individual site and product. Many clients who

have hired one of MSC's Anaconda screens go on to purchase one further down the track, being impressed by the performance of the Anaconda brand. MSC is also frequently contacted by clients, sometimes years after a sale or hire contract, for advice on product and/or equipment fine-tuning to maximise production rates.

MSC has competitive short-term and long-term dry hire rates on its equipment and is happy to put together quotations including cartage costs. ■
