

# New product releases

WORDS AND IMAGES SUPPLIED

**J**ust under a year ago Anaconda released its largest scalping screen yet, the DF512. This heavy-duty scalper features a high-performance, two-bearing 12'x5' screenbox and the largest feed hopper in its class (8m<sup>3</sup>).

MSC added the DF512 to its hire fleet at the beginning of the year and the screener has been busy ever since. "Feedback from clients on the DF512 performance has been exceptional," says MSC Hire Fleet manager Dan Meikle. With production rates of up to 350tph, if you're looking for a screener to rip through your product, the DF512 is the machine for the job.

Anaconda's scalping screens are well-known for their versatility. Suited to a wide range of product, including scalping quarry rock, crusher run, construction and demolition (C&D) waste, coal, topsoil, compost, road millings, scrap steel and more, both the DF410 and the larger DF512

are well-priced for their size and impressive throughput rates.

Following on from the release of the DF512, Anaconda has also released an additional two new products — the FSL100 heavy-duty scalper and the SR514 screener.

## FSL100

The FSL100 was one of the new products Anaconda featured at the recent CONEXPO show in Las Vegas. It's a mobile, high-capacity, heavy-duty mobile scalping unit, capable of handling up to 600tph. Built to withstand the rigours of handling material like rock or demolition concrete, the FSL100 is versatile and can be used on its own or with other screening plants. The product design allows the machine to operate in very confined spaces. The FSL100, like Anaconda's other products, has been designed with focus on quality, price, and containerisation. The machine can be decommissioned and transported in a

Triple deck SR514

low loader or shipped worldwide as it will track in and out of a 40-foot container (vibrating grid ships in a separate container).

## SR514

The Anaconda SR514 is a screening and stockpiling unit designed for a variety of uses. The SR514 is robust and economical to run and can screen/stockpile four products at up to 350tph. The SR514 consists of a track base, variable-speed, heavy-duty feed conveyor, double or triple deck 14'x5' screenbox, main conveyor, transfer conveyor, and either three or four integral variable-speed stockpiling conveyors.

## Tesab crushers

MSC is also once again offering a full range of crushers. It is now marketing the TESAB range of impactor and jaw crushers. MSC director Andy Meikle met with Tesab at CONEXPO in March and was impressed with its client-focused values and the quality of its products. The Tesab crushing range includes

SL100 producing GAP 65

mobile cone crushers, mobile impact crushers, mobile jaw crushers, plus static cone, impact, and jaw crushers.

Tesab can supply all crushers as individual units or part of a modular crushing system. Each crusher unit has the same benefits and performance that is provided by the

mobile machines. Tesab has had more than 20 years' experience in the industry and the team at MSC is sure the Tesab range of crushers will be well-received in the New Zealand market. ■
